Houseplants for Medium Light

These plants can tolerate a little direct light. They like it bright, but prefer mostly indirect light. Place them near a west or southeast window for the best results.

African Violet (*Saintpaulia*)

They like average to warm temperatures along with medium to high humidity. The soil should be kept evenly moist, but you should not get their leaves wet. They should be fertilized with a diluted fertilizer every time you water them.

Begonia (*Begonia* & ssp)

Begonias like average temperatures and evenly moist soil. They require light fertilization, more regularly during the growing season. If you grow begonias outdoors during the summer, you can pot them and bring them in for the winter. Just place them by a sunny window.

Bird's Nest Fern (*Asplenium nidus*)

This plant does well in bathrooms. It likes high humidity and average temperatures. The soil should be kept evenly moist. This is a slow grower.

Boston Fern (*Nephrolepis bostoniensis*)

Provide average temperatures and evenly moist soil for these to flourish.

Christmas Cactus (*Schlumbergera*)

These like average to warm temperatures, but you should let the soil dry out between waterings. It takes less water in the winter months.

Croton (*Codiaeum variegatum*)

It likes medium to warm temperatures and high humidity.

Dumb Cane (*Dieffenbachia*)

They like average temperatures and medium to high humidity. The soil should dry out between waterings.

Moon Valley Pilea (*Pilea*)

Also known as the Aluminum Plant. It grows pretty quickly and likes cool to warm temperatures and high humidity. The soil should be dry between waterings and you should pinch it back to keep it bushy.

Moth Orchid (*Phalaenopsis*)

This plant likes warm days and cool nights. You should never overwater the plant and remember to fertilize it once a month all year with orchid fertilizer.
